

Ray Lewis

Senior Modeller

t: 0118 375 8382
e: ray.lewis@mapl.co.uk

Though one of the senior members of Michael Aubrey Partnership, Ray's passion for technical design and computer modelling offers the business constant opportunities for innovation and change. Finding new and better ways to serve clients and exceed their expectations are key principles behind 'Constructive thinking'.

Ray's skillset is as impressive as it is comprehensive. He has design expertise in metal, mouldings and extrusions as well as in the detail and design of telecom structures. He has huge experience in project management and has site surveyed buildings and equipment. All these talents extend Michael Aubrey Partnership's understanding of client needs whilst providing the resources to resolve them.

But is it his profound understanding of computer design systems that makes the greatest difference. For someone who lists computer flight simulation as one his hobbies, it is only logical that it is in the area of Building Information Modelling that Ray has made his most telling contributions.

His command of Revit Structure and its 3D structural representations has benefited engineers and clients in providing a clearer demonstration of design, both in structure and construction phasing. The implications on saving time and costs have been impressive, as have been clients' response to the ground-breaking approach of 'Constructive thinking'.
